

Epson WorkForce Pro WF-R8590DTWF

24 PPM Inkjet Printer • Scanner • Copier • Fax

Reliability.....	Excellent
Ease of Use	Very Good
Print Drivers	Good
Scan Functions.....	Good
Multitasking	Good
Feedback	Good
Colour Print Productivity	Good
Black Print Productivity	Good
Colour Copy Productivity	Good
Black Copy Productivity.....	Good
Colour Print Quality.....	Good
Black Print Quality	Good
Setup.....	Good
Utilities	Fair
Specifications.....	Very Good
Toner/Ink Yield.....	Excellent

BLI RECOMMENDATION

A robust and highly productive performer, the Epson WorkForce Pro WF-R8590's super-high-yield ink pack system boasts much higher than average rated yields of 75,000 for all colours, making this A3-size inkjet all-in-one a good fit for environments where keeping downtime to a minimum and low service demands are vital concerns. The unit delivered a flawless performance in BLI's rigorous lab evaluation, completing its 37,500-impression durability test with no misfeeds and no service required. Other strengths include a single-pass feeder, wireless networking, and strong support for mobile printing, via Email Print, Epson iPrint, Apple AirPrint and Google Cloud Print. In addition, Wi-Fi Direct connectivity creates a secure peer-to-peer connection between mobile devices and the MFP, and helps to minimize the security risk of unauthorised access to the corporate network. Users can scan to a variety of destinations, including cloud repositories, a USB drive, network folders and to email. Standard OCR software converts paper documents into searchable and editable files. Easy to use, the WorkForce Pro WF-R8590's colour touchscreen control panel is highly intuitive and offers the ability to turn on eco settings, save job profiles, check consumable status and configure network settings; another handy feature is that users are able to save settings for regular jobs in the driver. In speed tests designed to be key indicators of real-world performance, the Epson WorkForce Pro WF-R8590 outpaced most laser competitors, registering fast first-print times from overnight sleep and best-in-class times for all three test files from ready mode, and the fastest first-copy times in its class. An Interrupt hard key lets walk-up users halt a current job to output a quick copy job without the need to wait for jobs in the queue to finish. Image quality for print output was good overall, with crisp dark fonts, distinct fine lines and natural skin tones in photographic output. In copy mode, quality was judged

Rating scale: Excellent, Very Good, Good, Fair and Poor.

Test duration: Two months, including a 37,500-impression durability test completed in BLI's product testing facilities.

About BLI: Buyers Laboratory LLC (BLI) is the world's leading independent provider of analytical information and testing services to the document imaging industry. Since 1961, buyers have relied on BLI to help them differentiate products' strengths and weaknesses and make the best purchasing decisions.

This lab test report summary is summarised from BLI's Lab Test Report. More information on the Epson WorkForce Pro WF-R8590DTWF is available through bliQ (www.buyerslab.com/bliQ).

good overall, plus users can select best mode to improve copy quality. BLI highly recommends the A3-size Epson WorkForce Pro WF-R8590 DTWF for small to mid-size workgroups and for customers seeking to supplement their print fleet with a low-cost A3 option.

STRENGTHS

- Highly reliable—flawless durability performance
- Exceptionally high tested yields for all colours
- Mobile print support offered via Email Print (which allows users to print email and file attachments) and, for Wi-Fi-enabled configurations, Epson iPrint, Apple AirPrint and Google Cloud Print
- Fast first-print times for all four test files; fast first-copy times from the platen and document feeder in both modes
- OCR functionality enables users to create editable, searchable digital files; compression in colour mode worked very well; control panel integration with Epson's Document Capture Pro helps simplify capture/routing workflows
- Broad greyscale range, dark fonts and smooth solids in print mode; natural flesh tones in photographic print output; negligible ink transfer when water was dripped across black output; no ink transfer when an alkaline highlighter was used
- Standard duplex single-pass feeder reduces wear and tear on the document feeder and on originals; standard automatic duplexing reduces paper waste; printing in economy mode helps extend the life of the cartridge packs
- Easy-to-use print driver has preprogrammed job settings and allows users to save their own one-click selections; Job Arranger Lite lets users insert blank pages and reorganize, rotate or delete pages in a document
- Simple setup and routine maintenance procedures

WEAKNESSES

- Saturation not bright enough in business graphics in print and copy modes using default settings; text and fine lines exhibited ink bleed in print mode
- Slow speeds when printing a suite of mixed file types and simplex copy speeds when outputting multiple sets
- Limited fleet management utility; lacks support for the management of a fleet of mixed hardware
- Slow scan speeds in simplex mode

RELIABILITY

Products are tested for two months, three weeks of which consists of a durability test during which the product is run at half of its manufacturer-rated maximum monthly duty cycle.

Test Period Duration	37,500 Impressions
Total Misfeeds/Misfeed Rate	1/1 misfeed
Service Calls	0
PMs	0
Total Service Calls (incl. PMs)	0

BLI's daily test usage is designed to replicate real-world use over an eight-hour workday, and as such includes a mix of various-size documents, simplex and duplex modes, and a mix of short, moderate and long run lengths, and on/off cycles, throughout the day. The durability evaluation also includes testing of the document feeder/scanner for an additional 10 percent of the monthly maximum volume, evenly divided over the course of the test.

PRODUCTIVITY AND EFFICIENCY

Productivity is a measure of the speed at which copy, print and scan jobs are completed. Efficiency is the percentage of the device's advertised speed at which it runs in testing. BLI's experienced test technicians complete a comprehensive series of speed-related tests to simulate real-world conditions. The tested speed and efficiency in the copy and print speed tables below represent the average for all run lengths tested.

Copy Mode

		Black		Full Colour	
Manufacturer's Rated Speed		21.0 CPM		22.0 CPM	
	# of Sets	CPM	Efficiency	CPM	Efficiency
1:1 Simplex Mode	1	7.7	36.9%	7.2	32.9%
	5	11.6	55.5%	10.1	45.8%
	Average	9.7	46.2%	8.7	39.4%
1:2 Duplex Mode	1	7.9	37.5%	7.7	34.8%
	5	12.7	60.6%	11.0	50.0%
	Average	10.3	49.1%	9.4	42.4%
2:2 Duplex Mode	1	8.5	40.2%	7.4	33.8%
	5	11.8	56.4%	9.9	45.0%
	Average	10.2	48.3%	8.7	39.4%
Document Feeder First-Copy-Out Time		10.59 Seconds		10.57 Seconds	

Print Mode

		Black		Full Colour	
Manufacturer's Rated Speed		24.0 PPM		24.0 PPM	
	# of Sets	PPM	Efficiency	PPM	Efficiency
1:1 Simplex Mode	1	17.8	74.2%	19.2	80.2%
	5	22.5	93.9%	22.9	95.4%
	Average	20.2	84.1%	21.1	87.8%
1:2 Duplex Mode	1	13.8	57.5%	15.2	63.2%
	5	16.8	70.2%	16.9	70.6%
	Average	15.3	63.9%	16.1	66.9%
Job Stream Speed		12.5 PPM		11.6 PPM	
Job Stream Efficiency		52.2 %		48.4 %	

Scan Mode	Black	Full Colour

First-Print Time (Seconds)	6.94	7.89	6.15

Key

Manufacturer's Rated Speed:	The manufacturer's advertised speed (copies per minute [cpm] or pages per minute [ppm]) for the device.
Document Feeder First-Copy-Out Time:	The time it takes in seconds for a copy to completely exit the device when a copy is made from an original placed in the document feeder.
Job Stream Speed:	The speed at which the device runs at when completing BLI's job stream test.
Copy Modes:	1:1 Simplex Mode: Single-sided original to single-sided copy 1:2 Duplex Mode: Single-sided original to two-sided copy 2:2 Duplex Mode: Two-sided original to two-sided copy
Print Modes:	1:1 Simplex Mode: Single-sided print 1:2 Duplex Mode: Two-sided print
CPM / IPM / PPM:	Copies per minute / Images per minute / Prints per minute. Entries under this heading indicate the speed at which the device operated when completing the test.

INA: Information not available. Test was not performed on the device.
 "--": Not applicable

Copier productivity tests are based on tests performed by BLI using a variation of ASTM Standard Test Method F1318. BLI tests a unit's copy productivity by making multiple sets (the number of sets depends on the rated speed of the device) of BLI's 10-page two-sided test original in three copy modes (1:1, 1:2 and 2:2). BLI tests a unit's print productivity by printing multiple sets (the number of sets depends on the rated speed of the device) of BLI's 10-page Word document test file. BLI's job stream includes Word documents, Outlook e-mail messages, Excel spreadsheets, PowerPoint, HTML and Acrobat PDF files. This test simulates the type of traffic a typical device might experience in a real-world, multi-user environment. BLI tests a device's scan speed by sending BLI's 10-page two-sided test original to an e-mail address as a 300-dpi PDF file. Scan speed is determined by measuring the time it takes for BLI's 10-two-sided test original to feed through the document feeder. Additional information on productivity and BLI's test methodology is available in the Help section on bliQ. See Glossary of Terms in the Table of Contents.

IMAGE QUALITY

BLI evaluates image quality using a combination of industry-recognized copy and print documents plus BLI proprietary test charts. A wide variety of factors are assessed using a combination of BLI technicians' expert visual opinion in addition to scientific measurements using densitometry and colour spectrophotometry equipment.

	Print Quality	Copy Quality
Text	Good	Good
Line Art	Good	Good
Halftone Pattern/Fill	Good	Good
Halftone Range	Excellent	Excellent
Solids	Very Good	Good
Colour Business Graphics	Good	Good
Colour Photographic Images	Good	Good

LAB TESTING OVERVIEW

Test Environment: This product was tested in BLI's environmentally controlled US or UK test lab, which replicates typical office conditions.

Test Equipment: BLI's dedicated test network, consisting of Windows 2008 and Microsoft Exchange servers, Windows 7 workstations and 10/100/1000BaseTX network switches.

Test Procedures: BLI's lab testing includes both BLI proprietary and industry-standard test procedures and documents. In addition to a visual image quality evaluation, optical density of primary colour (CMYK) solid fill output is measured using a densitometer, and colour gamut and consistency are evaluated using a colour spectrophotometer. The reliability test is conducted using Georgia Pacific Spectrum and Boise Cascade paper in the US and UPM, Data Copy and Mondi paper in the UK. In both cases, 30 percent of the paper is recycled paper. The media used for image quality testing is Georgia-Pacific Printing Paper (24 lb., 96 brightness) in the US and UPM Future ImageTech 100gsm paper in the UK.
